

Stretching Guide for Hiking and Backpacking

Markham and Aurora stretching guide for healthy backpacking

Stretching is essential when backpacking, particularly if you are hiking or travelling with a heavy one. A good stretching routine can help to minimize muscle imbalances, prevent injury, and improve your ability to use your backpack for longer periods. The following stretching program is designed for backpack users who do not have any current injuries or individual stretching needs. If you have an injury, or a specific mechanical imbalance that may be holding back your ability to regularly use your backpack, your Honsberger Physio+ physiotherapist can design a stretching program more specific for you.

When is the Best Time to Stretch?

When your muscles are warm and relaxed! For optimum performance you should stretch after you have done a general body warm up of about 5-10 minutes. If you are going out hiking, or travelling with a backpack this might mean stretching after a short 5 minute brisk, walk or jog. Dynamic stretches are used to prepare your muscles for donning the backpack and walking or hiking while carrying the weight of the pack. Static stretches, on the other hand, are more useful to improve your overall flexibility and are most effectively done after your hike or walk, once you take the backpack off and as part of your cool down. With backpacking or hiking, a good static stretch at the end of your hike or travels will help relieve any tension from carrying the weight and make sure you can carry on again tomorrow!

Both the dynamic and static stretching routines below can also be useful if you have to carry a heavier backpack to school or work on occasion, but remember, there are weight guidelines for regular backpack use to prevent injury. Refer to our guide here [Choosing a Backpack and Related Equipment](#) to ensure you aren't overloading yourself on a daily basis.

Rules for Dynamic Stretching: Warm up your body first, then stretch while your muscles are still warm.

- Move through your range of movement, keeping control of the movement with your muscles. Do not allow momentum to control the movement by "flinging" or "throwing" your body parts around.
- You may feel light resistance in your muscles, but you should never feel pain during a stretch.
- Start with slow, low intensity movements, and gradually progress to full-speed movements through range of motion. Complete these motions for several repetitions (10-15 times.)

Rules for Static Stretching:

- Be sure to stretch while the muscles are still warm from hiking or walking with your backpack.
- Slowly take your muscles to the end of their range. You will feel slight resistance in the muscle, but you should never feel pain during a stretch.
- Hold the stretch in a static position. Do not bounce.
- Maintain each stretch for 20-30 seconds. Repeat each stretch 3-4 times.

Essential Stretches when using a backpack:

These muscles are the key muscles used when carrying a backpack as well as when donning the pack and taking it off. Don't forget to stretch both sides. The stretching program shown below will take about 10-15 minutes to complete.

Dynamic Stretches:

Arm Swings

Repeated Cervical Rotation

Shoulder Rotations

Leg Swings Forward and Back

Back Rotation Stretch:

Lunges

Static Stretches

Neck Stretch

Posterior Shoulder Stretch

Standing Back Extension Stretch

Standing Back Flexion Stretch

Hamstring stretch

Quadriceps stretch

Hip Flexor Stretch

Gluteal Stretch

Calf Stretch-Gastrocnemius
